

AL TOUR RESERVATION SYSTEM

“Stay on the road to reservation management!”

The **AL Tour Reservation System** is a reservation management software system for companies that sell tours and events by the seat or per person. Operators such as tour bus companies, sightseeing tour companies, airlines, river rafting outfitters and others that package and sell trips from a one-day tour to multi-day tours that accept reservations on a per seat basis are ideal users for this specialized software.

The AL Tour Reservation System:

- Keeps track of the number of available seats on a departure; reservationists can sell against this inventory in real time.
- Keeps track of multi-level pricing – adult, senior and children – and auto calculates the cost of the tour and any deposits due at the time of reservation. Outside attractions can be monitored for availability separately.
- Accepts coupons, discounts and handles third-party voucher billings.
- Tracks and reports agent commissions and is capable of splitting a commission between multiple agents.
- Handles high volume – takes unlimited reservations a day.
- Is compatible for e-commerce and ticketing kiosks that allow reservations from remote locations.
- Works with touch screen technology.

The **AL Tour Reservation System** generates operational and statistical reports :
